INTERNATIONAL WORKSHOP »ANTHROPOLOGY AND HEALTH«

ANTHROPOLOGY OF TRANSITION AND TRADITION

September 12th – 14th, 2012
Hvar, Croatia

Whilst it is widely accepted that the process of national transition from a »developing« to a »developed« status is assessed against economic indicators, it is also recognized that the process of transition is driven by a variety of demographic, social, political, cultural, and biological changes that both lead to and follow from economic transition. Anthropologists have traditionally sought to understand transition through examining cultural, social, or biological changes in, for example, the organization of society or in changes in human morphological variation. It is the aim of this workshop to explore transition in the light of the empirical evidence from transitional societies that provide new insights into traditional anthropological theory regarding social, biological, and behavioral outcomes that result from »development«. The relationship between economic and demographic indicators of the level of transition and anthropological outcomes that reflect associated changes in social organization, behavior and morphology will be explored. The workshop will be broad in scope including representatives with track records of research in transitional economies in addition to representatives from post-transitional nations who study transition from the perspective of industrialized societies.

PROGRAMME

The workshop is divided into six aspects of transition; economic, demographic, social, cultural, behavioural and epidemiological. The order of these topics is based on a functional scheme in that economic transition presages demographic and social transition, but all aspects are very closely aligned and there will be discussion of causation and outcome. Emphasis will be put on the BRICSA transitional countries/economies of Russia, India and South Africa, but interesting perspectives from Ethiopia, Croatia and Samoa will also be presented.
