

17th Congress of the International Society for the Study of Human Growth and Clinical Auxology

Human Biology: The exposome, growth, maturation, and health across the lifecourse

The conference will present recent advances in population and clinical research on human growth and development. Human biologists, pediatricians, endocrinologists, epidemiologists, biostatisticians, geneticists, bioanthropologists, and others will contribute updates from their fields and engage in discussions across disciplines to promote new research and clinical understanding.

June 22–24, 2026

Loughborough University, UK

A joint International Society for the Study of Human Growth and Clinical Auxology (ISGA) and Society for the Study of Human Biology (SSHB) Meeting

Themes:

1. The exposome: biocultural interactions and human health
2. Genomics, nutrition and growth: translating insights into practice
3. Child Growth maturation and later health outcomes
4. Environmental disruptions and disasters: human growth and health
5. Evolutionary approaches to human growth

The abstract submission portal is open until 30 March 2026. More information to follow.

Discounted registration for ISGA members.
